man's need for communication with his fellow man is possibly his greatest need and the fulfilment of his other needs and desires is largely dependent upon or at the last greatly facilitated by his ability to satisfy this basic one. Louise Tracy defective hearing disrupts human communication. It gives rise to anxiety, frustration, stress, isolation, loss of self esteem, even loss of livelihood for the individual with a reduced capacity to receive and interpret sound. Because we live in families and communities the effects of hearing loss are not restricted to the impaired individual those who associate with that person especially those who are very close are affected and prone to many of the same emotions and stresses from the earliest times man has sought for remedies for hearing loss. Incantations, infusions, cuppings and bleedings all have been advocated and with the rare serendipitous exception have been equally ineffective. The only real assistance for countless generations was to cup the hand behind the ear and ask the speaker to raise their voice.

This book addresses an underserved area in the field of diagnostic and rehabilitative audiology specifically people with disabilities. The first section presents an overview of specific disabilities and how different cultural practices impact on their management. The second section focuses on the evaluation of hearing impairment within various disabled groups and the third section concentrates on overall approaches to audiology management evaluation and assessment. Chapters include cases of people with AIDS and HIV, cerebral palsy, visual impairments, Down syndrome, older adults with Alzheimer's disease as well as others. The book will serve two audiences: practicing audiologists and other hearing healthcare providers who work with disabled populations as well as graduate students of audiology and medical students in audiology programs.

More than 31 million people in the United States alone suffer from hearing loss that is one in every 10 people in the current population. Of those only five to 10 percent can be treated medically leaving the largest number in need of other solutions. It is for those people that veteran audiologist Susan Dalebout wrote this comprehensive guide. The book explains with a simple overview of hearing anatomy and physiology how we hear and details hearing evaluation tests the interpretation of those tests.

and the conditions that most commonly cause hearing loss in adults all things related to adult hearing loss are explained as is a full menu of hearing rehabilitation services devices and technology this text includes discussion of the importance of hearing in our lives the psychological social and emotional effects of untreated hearing loss and the effects on family members and friends also included is a chapter on prevention describing the dangers of exposure to hazardous noise and certain drugs and how to protect against damage to hearing unique for its breadth and depth this text also offers detail on hearing aids care and maintenance as well as factors to consider when purchasing an aid cochlear implants hearing assistance technology and future trends in hearing restoration

hearing and speech professionals globally recognise the importance of managing the needs of the whole person as part of any hearing rehabilitation program while hearing aids cochlear implants and other technologies form a critical part of a person's rehabilitation program clinicians also need to be able to manage the person's adjustment to their disability to understand the factors that motivate a client to change to be able to aid the individual in managing their expectations of audiological benefit and to have ready access to strategies to facilitate this helping process this book has been written to assist clinicians in providing their clients with a holistic rehabilitation experience the text provides the reader with a psycho social framework for understanding practice while offering a range of practical strategies tools and counselling ideas for use in the clinic including the montreal rehabilitation program finally available in english representing a watershed in hearing rehabilitation the book provides clinicians and students with materials that will aid clients in managing hearing loss where the technology leaves off
